If you want to delete a record from any MySQL table then you can use SQL command **DELETE FROM**. You can use this command at mysql> prompt as well as in any script like PHP.

## Syntax:

Here is generic SQL syntax of DELETE command to delete data from a MySQL table:

```
DELETE FROM table_name [WHERE Clause]
```

- If WHERE clause is not specified then all the records will be deleted from the given MySQL table.
- You can specify any condition using WHERE clause.
- You can delete records in a single table at a time.

The WHERE clause is very useful when you want to delete selected rows in a table.

## Deleting Data from Command Prompt:

This will use SQL DELETE command with WHERE clause to delete selected data into MySQL table tutorials\_tbl

## Example:

Following example will delete a record into tutorial\_tbl whose tutorial\_id is 3.

```
root@host# mysql -u root -p password;
Enter password:*****
mysql> use TUTORIALS;
Database changed
mysql> DELETE FROM tutorials_tbl WHERE tutorial_id=3;
Query OK, 1 row affected (0.23 sec)

mysql>
```

## Deleting Data Using PHP Script:

You can use SQL DELETE command with or without WHERE CLAUSE into PHP function **mysql\_query()**. This function will execute SQL command in similar way it is executed at mysql> prompt.

## Example:

Try out following example to delete a record into tutorial\_tbl whose tutorial\_id is 3.

```
<?php
$dbhost = 'localhost:3036';
$dbuser = 'root';
$dbpass = 'rootpassword';
$conn = mysql_connect($dbhost, $dbuser, $dbpass);
if(! $conn )
{
    die('Could not connect: ' . mysql_error());
}
$sql = 'DELETE FROM tutorials_tbl
        WHERE tutorial_id=3';
```

```
mysql_select_db('TUTORIALS');
$retval = mysql_query( $sql, $conn );
if(! $retval )
{
    die('Could not delete data: ' . mysql_error());
}
echo "Deleted data successfully\n";
mysql_close($conn);
?>
```
